DNA VIBE[®]
REGENERATIVE LIGHT THERAPY

DNA-VIBE

DNA-VIBE

#DNAVIBE

No Chemicals. No Drugs. No Invasive Procedures.

DNA Vibe's patented and award-winning Regenerative Technology is sure to surprise you! It's unlike any other light therapy you've ever seen or heard about (hence the patent). Surprisingly, it's 20 times **LESS** powerful than the **LEAST** powerful conventional light pads on the market. Strange thing to boast about, right? But when you hear why that is (and it's very intentional), you'll understand why it's orders of magnitude **MORE** powerful where it matters most: Helping people live happier, healthier, more active lives--naturally. How? Let's find out!

The body's natural response to injury is to stimulate DNA expression to regenerate and replace damaged tissues. DNA Vibe's patented technology is uniquely designed to boost this natural process through molecular excitation of DNA (aka "Vibing with your DNA"). This occurs when the sinusoidal (sine wave) pattern of energy matches the sinusoidal pattern of the DNA double-helix molecule. This state of "harmony" (or "excitation") stimulates DNA expression, boosting the body's ability to avoid injury and reduce inflammation and pain, while accelerating and improving recovery.

All other light pads are far too powerful for the molecular excitation needed for this to occur. Scientifically, their light energy is absorbed into the tissues where it is converted to thermal and kinetic energy (aka heat). In contrast, DNA Vibe's technology utilizes a proprietary approach with a minimum number of low-power, highly-diffused, precision-tuned, frequency-stabilized emitters – all essential requirements to gently stimulate the body's natural DNA-driven regenerative processes.

Feel Better. Guaranteed.

The Miraculous Symphony

As mentioned, when our body is injured, it immediately stimulates DNA expression as its built-in recovery method. This triggers what we like to call "The Miraculous Symphony": DNA sets in motion the synthesis of amino acids and protein chains; stimulates ATP production through RNA interaction with mitochondria; and releases enzymes which relax soft tissues causing vessels and capillaries to expand under pressure. When you stop and think about it, this is a truly remarkable process: The body naturally builds healthy tissue and automatically provides energy, oxygen, platelets and growth hormones. This is the body's natural, beautiful & healthy regenerative process. Pretty amazing.

Importantly, **this process is entirely non-thermal**: ATP (cellular energy) is provided through RNA interaction and not through thermokinetic reactions. Vessels and capillaries expand under pressure, and not through thermal expansion. In contrast, because other light pads are many times too powerful and lack the frequency precision and stabilization needed for molecular excitation, their primary effect is through the absorption of light and its conversion to heat inside the tissues. It's basic physics. They are effectively non-regenerative (and relatively very expensive) light-based heating pads, and the functional equivalent of decorative LED strip lighting (see proof below).

So, why is the body's natural regenerative process non-thermal? Simple: because we're mammals. While warmth from time to time can be soothing and relaxing (a key reason we offer an excellent and far more cost-effective hot and cold gel pack accessory), it's best and safest to work in harmony with the body's natural nonthermal processes.

Some illuminating differences

For the sake of your best self (and best friend), it's worth seeing how DNA Vibe differs from conventional light pads. A quick glance shows they're not the same, and when you dig deeper, the differences are quite stunning!

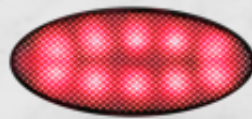

One of these is not like the others

Other light pads basically look the same (high-density, undiffused points of light)

1 or 2 modes (red and/or infrared)

Only one stands apart (minimum # of highly-diffused emitters)

4 modes (red, infrared, magnetic & vibration)

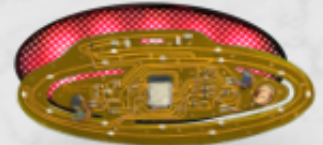

Peeking inside is very revealing

Nothing but LED light strips with power leads (the exact functional equivalent of decorative LED strip lights)

Non-regenerative wearable Holiday lights

2 GHz parallel processor, advanced power mgmt, frequency stabilization, engineered pulse mgmt.

Advanced life-changing regenerative technology

This is true for all shapes & sizes *(nothing but LED light strips)*

Typical Pad

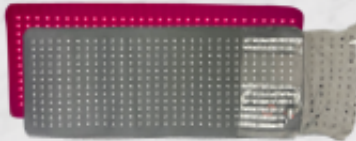

Typical Ankle Wrap

Typical Knee Wrap

Typical Yoga Matt

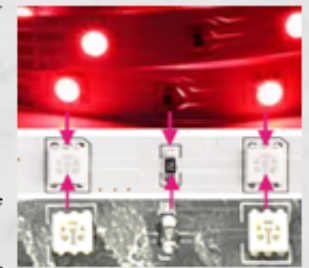

Same as LED light strips? EXACTLY.

Light Strips

Light Therapy*

**The therapeutic equivalent of leaning against your car's brake lights.*

Not just a product. A movement.

We are committed to making the world a better place, one better life at a time (including yours). Our commitment combined with our confidence in our distinctive technology is why we offer an iron-clad guarantee: Give the Jazz Band a shot. If it doesn't help you, we'll provide a full refund. We've got your back! (and neck, knees, elbows, ankles, hands, feet, and more).
